Kinetic Sculpture of Depression

The parts of a kinetic sculpture are constantly moving. For example, a ball might hit a lever that sets off a pulley. The pulley might, in turn, pull a bucket that dumps water on a paddle wheel. The paddle wheel creates another movement. Different actions can take place independently of one another as well. But all the actions together have a combined result. Draw and label a simple kinetic sculpture commemorating the causes of the Great Depression on the back of this sheet. At least one part on your sculpture must represent each Key Content Term. These terms may appear on your machine in any order. However, the more clearly you can show how one action led to another, the more elegant your machine will be. You may make multiple drawings or one. Also explain your kinetic sculpture in the space provide. An example has been provided.

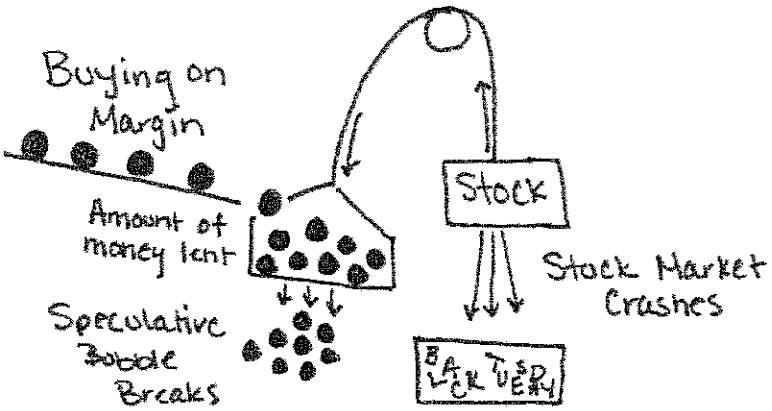
Key Terms

- Black Tuesday
- stock market crash
- buying on margin
- overproduction
- underconsumption
- Dust Bowl
- Hawley-Smoot Tariff Act



Explanation:
As more people were buying on a margin, borrowing money, making stock prices kept rising. Eventually, the Speculative bubble bursts causes the stock market to crash, a significant drop in the stock market. This was known as Black Tuesday, Oct. 29, 1929, because a lot of people lost a lot of money that they didn't have.
